

Agentic AI Hyperchallenge

Focus Area: Underwriting

Use Case: Small Business- Broker
Underwriting Interaction Agent

June 2025

Small Business- Broker Underwriting Interaction Agent

Objective

- Train an AI agent based on historical live chat data. The new agent should answer broker questions about insurance transactions for SME business and be ready to execute those transactions into the core systems

Key Features

Inference of rules

- Based upon a large sample of live chats, extract conversations and infer from them the rules about underwriting transactions

Augmentation with guidance

- Overlay inferred rules with underwriting appetite/ guidelines and supplement with standard wordings, terms and conditions.
- Ability to refer to specific quote / policy schedules per policy

Agent decision making

Trained agent should be able to:

- Answer broker chat questions
- Confirm acceptance of coverage, amendment, discount, etc
- Decline where appropriate
- Refer internally where needed

Key Deliverables

- Working prototype with chat functionality to engage with brokers, answer questions, and decide about the further processing of new business, renewals & MGAs

Outcome

- Increased efficiency and business retention through seamless transitions and AI-driven enquiry routing, resulting in improved broker satisfaction and optimized resource utilization

Evaluation Criteria
